AIR LATEX

INFLATE AND REPAIR FOR BICYCLE WITH QUICK CONNECTOR

DESCRIPTION

Inflate and Repair bicycle with SPRAYKE quick connector. Product equipped with an internally mounted connector (without external cannula) that allows the cyclist to carry the can directly in his pocket or in the bike frame. This connector is also an advantage for all off-road cyclists, who tie the can on the bike frame. The dispenser stays clean thanks to the transparent cap. Specific product for instantly repairing and inflating, without removing the wheel, any type of tire, with or without an inner tube. It acts deeply in the tire, forming a sealing film that ensures effective repair. Product based on rubber latex, without ammonia, which repairs and inflates punctured tires at the same time. The inflate and repair SPRAYKE is specifically formulated to guarantee a quick and temporary repair in emergency situations.

CHARACTERISTICS

- Seals and inflates quickly, allowing the rider to cycle to the first service station to examine the condition of the tire and / or have it changed by a professional
- Forms a stable and durable film inside the tire. This internal film lasts even longer than the entire life of the tire itself
- The can is supplied with a quick connector that allows use with Presta and Woods valves. (Not suitable for Schrader valves)
- Easy to use with all types of tires, with or without an inner tube
- The aerosol uses butane propane to maintain a constant pressure which guarantees complete emptying of the cylinder

APPLICATIONS

Specific product for bicycles. Tire types: road or MTB tubeless or with inner tube. Allows use with Presta and Woods valves. (Not suitable for Schrader valves).

INSTRUCTION OF USE

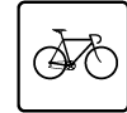

If possible, remove the object that caused the puncture. Shake well before use. In the presence of low temperatures, heat the can in your hands before use. Position the valve upwards (12.00). Remove the transparent protective cap from the can. Hold the can well in the hand in an upright position. Unscrew the cap on the Presta valve. Insert the connector directly onto the valve and push hard enough. Continue until the tire is inflated. Remove the connector and close the cap on the valve. Spin the wheel quickly so that the product can act. As soon as possible, completely deflate the tire and re-inflate it with air to the prescribed pressure. Have the tire checked by a mechanic informing him of the use of this flammable product.

PACKAGING

Spray Aerosol ml 100

Box 12 can

Product Code 60310/01
